

Technology Stack

Date	30 September 2026
Team ID	SWTID-2026-3326
Project Name	Blog Nest
Maximum Marks	2 Marks

Define Your Technology Stack:

The Blog Nest application will use HTML, CSS, JavaScript, and Bootstrap for the frontend to create a responsive and user-friendly interface. Python with Django will be used for backend development to manage users, blogs, comments, and application requests. MySQL will be used as the database to store user and blog-related information. Render will be used for cloud hosting and deployment. GitHub will be used for version control and team collaboration. Cloudinary will be used to manage and store images uploaded for blogs and user profiles.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	HTML, CSS, JavaScript, Bootstrap	Used to create a responsive, attractive and user-friendly blog interface.

2	Backend / Server-Side	Python – Django	Provides secure and structured backend development with efficient handling of users, blogs and requests.
3	Database / Data Storage	MySQL	Stores user details, blog posts, comments and other application data in a structured manner.
4	Cloud / Hosting / Deployment	Render	Provides simple and cost-effective deployment for the Blog Nest web application.

5	Version Control & CI/CD	GitHub	Helps team members collaborate, maintain source code and track project changes.
6	Third-Party APIs / Other Tools	Cloudinary	Used for uploading and managing images used in blog posts and user profiles.
