Project Name	Blog Nest
Maximum Marks	5 Marks

Coding & Solution

Blog Nest is a web-based blogging platform that allows users to register, log in, create and publish blog posts, read blogs, search for blogs, and interact with posts through likes and comments. The application is developed using a modular structure to provide clean, maintainable, and reusable code.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/ranganathan2492006-max/AI-BlogNest-API.git
Programming Language(s)	HTML, CSS, JavaScript, Java
Framework(s) Used	Spring Boot
Key Features Implemented	User Registration and Login; Create and Publish Blog; View Blog Posts; Edit and Delete Blogs; Search Blogs; Categories; Like and Comment; User Profile
Pending / Incomplete Features	None
Setup / Run Instructions	Install Java and required dependencies. Clone/download the Blog Nest project. Configure the database connection. Run the Spring Boot application and open the application in a web browser.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The Blog Nest application follows a modular development approach with separate components for user management, blog management, search, categories, likes, comments, and database operations. The code is structured to support readability, maintainability, and future enhancements.
