

Performance Testing

Date	30 September 2026
Team ID	SWTID-2026-3326
Project Name	Blog Nest
Maximum Marks	5 Marks

Step 1: Testing Overview

Field	Details
Testing Tool Used	Apache JMeter
Type of Testing	Load Testing
Target Module / API	Blog View, Blog Search and Blog Creation APIs
Test Environment	Local Development Environment
Test Date	30 September 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Multiple users access the Blog Home page simultaneously	10	60	Page should load successfully without errors
2	Multiple users search for blogs by keyword	20	60	Search results should be returned within acceptable time
3	Multiple users view published blog posts	10	60	Blog posts should be created successfully

				without request failure
4	Multiple users create and publish blog posts	10	60	Blog posts should be created successfully without request failures

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	Enter JMeter value	Pass/Fail	Based on test result
2	Response Time (Max)	< 5 seconds	Enter JMeter value	Pass/Fail	Based on test result
3	Throughput (Req/sec)		Enter JMeter value	Pass/Fail	Requests processed per second
4	Error Rate	< 1%	Enter JMeter value	Pass/Fail	Based on failed requests
5	CPU Utilization	< 80%	Enter system value	Pass/Fail	Monitor during testing
6	Memory Utilization	< 80%	Enter system value	Pass/Fail	Monitor during testing

Step 4: Observations & Analysis

The Blog Nest application was tested under simulated user load using Apache JMeter. The main blog-related operations such as viewing blogs, searching for blogs, and creating blog posts were considered for performance testing. Response time, throughput, error rate, CPU

utilization, and memory utilization are used to evaluate the system's performance. The final Pass/Fail status should be updated based on the actual test results.

Step 5: Screenshots / Evidence
