

Project Executable Files

Date	30 september 2026
Team ID	SWTID-2026-3326
Project Name	AI BlogNest API
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA – Local API
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	

		Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

AI BlogNest API/

```

|
|— controllers/
|— models/
|— routes/
|— middleware/
|— services/
|— config/
|— server.js
|— package.json
|— .env
|— README.md
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	NA – Local API
Login Credentials (Demo)	Use registered API user credentials
Platform / Hosting Provider	Local Node.js Environment
Repository Link	https://github.com/ranganathan2492006-max/AI-BlogNest-API.git
Demo Video Link	

Step 4: Run Instructions

1. Install **Node.js** and **npm**.
2. Open the **AI BlogNest API** project folder in Visual Studio Code.
3. Install the project dependencies:

```
npm install
```

4. Configure the required environment variables such as MongoDB connection details and Gemini API key.

5. Make sure MongoDB is running and accessible.
6. Start the backend server:

```
npm run dev
```

7. Open **Postman** or **Thunder Client**.
8. Test the following APIs:
 - o User Registration
 - o User Login
 - o Create Blogs
 - o Fetch Blogs
 - o Generate AI Blogs
9. Verify the JSON responses returned by the API.

These execution and API-testing steps are documented in the project documentation.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	MongoDB connection is required for database operations	Configure the MongoDB connection correctly
2	Gemini AI API key is required for AI blog generation	Add the Gemini API key in the environment configuration
3	Summarization endpoint may not be available	Use only the implemented API endpoints
